**Description**

Hello,

PASTT script used at http://dev.beem-project.com/translation/ has insufficient input sanitization:
https://code.google.com/p/android-php-translator/issues/detail?id=13

By exploiting this vulnerability remote user can create arbitrary directory in file system and possible retrieve or modify some other web server information (with permissions of PHP interpreter).

- *Status changed from New to Assigned*

- *Assignee set to Vincent Véronis*

- *Priority changed from Urgent to High*

Thanks for the report. The translation site is now disabled until we got a solution.
Merry Christmas ^^
