Target version:			
Description			
Please add an ability to choose contact's resource we would like to chat with (i.e. what psi allows).			
Sometimes a contact (buddy, or how you call it) is logged in using 2 or more resources simultaneously (e.g. from a laptop and from a mobile phone). By default BEEM will chat with the one with the highest priority, but in some cases there's a need to send a message to (or just chat with) resource with the lower priority.			
This could be selected from within the chat window by using some menu option or by holding a finger on the contact's status message.

Hello,

It's already possible, when you are in the roster, make a long press on a contact and you will have the option to open the chat with a specific resource.

About the idea to add it somewhere in the chatwindow too, it can be an improvement ...
