Description i download beep source . i run the command \$SDK_DIR/tools/android update project -t android-7 -p \$BEEM_DIRECTORY create project from ecllipse using create project from source . But src folder was no import. So manually i import src folder into project . But aidl was not import . give error of certain import missing like com.beem.project.beem.service.aidl.IXmppFacade;

Did you have everything installed, including the Android asmack XMPP library?

Hello,

You have "a lot" of links about how to create an eclipse's project from sources, google "android eclipse creating project from existing sources".

Then after creating it, like Mark said, you must manually import libs from the libs/ directory into your project. And that's all, it's done, you may compile and install beem.

If you still have errors, check the version of the java which is used by eclipse (must be 1.6 and not 1.5) or your android/eclipse installation.
