Description

Hi friends,

I setup Openfire + Spark, and it can successfully creating account, login and communicate.

However, when I use the same account to login, error "Connection failed. No response from server." turned up at
if (!mConnection.connect()) {
mErrorMessage = mConnection.getErrorMessage();
return false;
}

I am using anton@im.gyt.com to login, which is same as it is in Spark. Could you please advice that what is the problem for the connection?
