Affected version:	0.1.7		
Description			
<p>I found in Android X86, it runs kernel Linux3.0.XX, but Android SDK is Kernel2.6, I use the numeric ip, 192.168.1.11, as XMPP server, it will show me connection fail. And I trace the code, in BeamService.initConnectionConfig(), it wolud show me DNS EXCEPTION out!!</p> <p>so, I try to change the code such as:</p> <pre>if (mSettings.getBoolean("settings_key_specific_server", false)) { mConnectionConfiguration = new ConnectionConfiguration(mHost, mPort, mService, mProxyInfo) ; } else {try { mConnectionConfiguration = new ConnectionConfiguration(mService, mProxyInfo); } catch (Exception e) { mConnectionConfiguration = new ConnectionConfiguration(mHost, mPort, mService, mProxyInfo) ; } }</pre>			
<p>It works fine!!</p> <p>TEST PLATFORM: Android 4.0.4, PAD, X86, Linux Kernel: 3.0.XX</p>
