Description

Hi Team,

I downloaded the Beem-Jingle project. I tested the voice call with having both the phone on same network(it means eiher both are on same wifi n/w or both are on 3G n/w) it was working perfectly fine. But When I tested with different network(it means one phone on wifi and other on 3G) I can send text message but I am not able to hear the voice in Voice call.

Its not giving me any error or exception in server as well as client side.

Please help if any buddy knows the solution or anything related to this problem.

Thanks,

Yakub Moriswala
