Description

Hi guys,

Please pardon me, I'm new to all these.

After downloading the Beem 1.8 source codes, I am not able to run it using Android Studio. The error was that there was no Default Module selected. The combobox for selecting a module as default module is also empty. How do I overcome this?

I was also asked to specify an SDK. I chosed SDK 16 because that is the target SDK used in Beem's manifest.

Thanks

The source code of the 0.1.8 version has not been ported to Android studio. If you want to develop on Beem with Android studio you will have to get the latest source code of the trunk from the mercurial repository. You can use mercuriale to get the code at http://beem-project.com/hg/trunk/ or download an archive here http://beem-project.com/hg/trunk/archive/tip.zip
